

## ACSE Professional Practice Products

**The Professional Practice Department now features products two new products listed below:**

### **Incident at Morales: An Engineering Ethics Story** \$250

This recently released NIEE video, study guide and PowerPoint slideshow presents a study of ethical responsibilities and choices similar to many encountered in engineering practice. The video shows that good and well meaning people can unintentionally get into situations that may result in unethical and unfortunate consequences. The video is designed to help viewers become more aware that:

- Ethical considerations are an integral part of making engineering decision
- A code of ethics will provide guidance in the decision-making process
- The obligations of a code of ethics do not stop at the United States border
- The obligations of engineers go beyond fulfilling a contract with a client or customer.

Incident at Morales is 36 minutes long. Thus, making it short enough for viewing and discussing at society meetings, company lunches, and college classes, and longer if presented in a series of educational meetings.

[View PDF Study Guide](#) (PDF) The 24-page Study Guide contains suggestions for use of the video, the story line, list of characters, synopsis of the video, purpose of the video, over 100 questions about ethical issues that the story raises, and a suggested assignment for students and viewers.

[View PDF PowerPoint Slideshow](#) (PDF) 26 slides make up the PowerPoint Slideshow that may be used as an introduction .

### **Testing Water . . . And Ethics**

Video Tape and Workbook, \$150.00

A young engineer confronts his first professional dilemma and designs an engineering solution to an ethical problem. 1998, 28 mins.

Each video comes with a Workbook that includes: Suggestions for using the video; Instructor notes; An analysis of ethical issues (Telling the truth; Protecting the public; Loyal employee; Obligation and sacrifice); Details of the FPP Method; Suggestions for small group discussions and written assignments; Worksheets; Additional case studies; NSPE Code of Ethics; Site plan map; and a complete video script.
