

COMBATING CORRUPTION IN ENGINEERING AND CONSTRUCTION

AN ENGINEER'S CHARTER

We, the undersigned, as leaders in the global engineering community, recognize that corruption of all forms diverts resources from projects intended to raise living standards, threatens sustainable development, impoverishes communities, and tarnishes the reputation of the profession.

We hereby join in the battle against bribery, fraud, and corruption in engineering and construction worldwide.

We acknowledge, as fundamental principles of professional conduct that engineers as individuals must:

- Ensure that they are not personally involved in any activity that will permit the abuse of power for private gain.
- Recognize that corruption occurs within the public and private sectors, in the procurement and execution of projects, and among employers and employees.
- Refuse to condone or ignore corruption, bribery, or extortion; or payments for favors.
- Urge professional engineering societies and institutions to adopt and publish transparent, enforceable guidelines for ethical professional conduct.
- Enforce anti-corruption guidelines by reporting infractions by any participant in the engineering and construction process.

Further, we pledge to support the formal adoption of these principles by our professional organizations; build professional and public support for zero tolerance for bribery, fraud and corruption; seek transparency in all dealings with public officials and private owners; and coordinate our efforts with the work of Transparency International, the Partnership Against Corruption Initiative of the World Economic Forum, the World Bank, World Federation of Engineering Organizations⁽¹⁾, FIDIC and other local or global organizations seeking the same goal.
